

Edward S. Sadar, M.D.

Medicine

Dr. Sadar graduated from Collinwood High School in 1961. While at CHS, he achieved academic success as evidenced by his election to president of the National Honor Society, vice president of his graduating class, and salutatorian. His classmates voted him as “Most Likely to Succeed”. He also received an Honor Key as CHS officials recognized his outstanding scholarship.

Following graduation, he applied for and received a Congressional appointment to West Point, the Army’s elite academy for career officers. In his freshman year, he excelled in studies as he finished in the top one per cent of his class. In his sophomore year he requested permission to attend medical school following his initial four years of schooling. This request was denied as the Army wanted him to complete his schooling and then serve four years of active duty before he could enter medical school. After some thought, he resigned from West Point and returned to Cleveland to attend and graduate from Western Reserve University in 1964. Dr. Sadar received his medical degree from Case Western Reserve University in 1968. After completing a surgical internship at University Hospitals in Cleveland, Ohio, Dr. Sadar then completed his Residency in Neurological Surgery at the University of Virginia. His training included one year of training in Plymouth, England and six months at the University of Western Ontario in London, Ontario.

Dr. Sadar began his practice of Neurological Surgery at the Cleveland Clinic where he remained for five years. He then moved to Columbus, Ohio where he joined a friend and established Central Ohio Neurological Surgeons, a group which expanded to thirteen members at the time of Dr. Sadar’s retirement in December of 2004. While in practice Dr. Sadar handled all types of head and spine cases, although his special interests were in brain tumors and vascular problems of the brain.

Since retirement Dr. Sadar has been able to enjoy more time with his wife, Melinda, his three daughters (Jessica, Elena and Emily) and seven grandchildren, and to pursue all of those interests which a full-time practice of surgery makes impossible.
